

## Pre-Dental Hygiene Associate of Science 2025-2026

**Nature of Work:** The dental hygienist works as a part of the dental health team to provide clinical and educational assistance. Dental hygienists work directly with patients in the office of a dentist or individually in industries, schools, or public health agencies. In the office, a dental hygienist's duties include prophylaxis and X-ray work, however in a few states such as Washington; expanded duties include the filling of minor cavities. Dental hygienists examine patients' teeth and gums, recording the presence of disease or abnormalities. They remove stain and plaque from teeth, apply caries-preventive agents such as fluorides, pit and fissure sealants, take and develop dental X-rays, place temporary fillings and periodontal dressings, remove sutures, and polish and re-contour amalgam restoration. Dental hygienists also help patients develop and maintain good oral health.

**Professional Training:** Requirements for licensing vary from state to state. Following the completion of training, state board examinations are required. Certification may have reciprocity between states. After the Associate of Science degree, students usually transfer to a program that can give the additional training needed.

**Job Outlook:** According to the Bureau of Labor Statistics (BLS), "Employment of dental hygienists is projected to grow 9 percent from 2021 to 2031, faster than the average for all occupations. About 16,300 openings for dental hygienists are projected each year, on average, over the decade." The BLS reports, "studies linking oral health and general health, and efforts to expand access to oral hygiene services, will continue to drive the demand for preventive dental services" which are typically provided by dental hygienists. (See [www.bls.gov](http://www.bls.gov)) Job prospects are expected to be favorable in most areas, but there will be strong competition.

**Earnings:** Earnings vary by geographic location, employment setting, and years of experience; and dental hygienists may be paid on an hourly, salary, or commission basis. In their May 2021 salary survey, the Bureau of Labor statistics reports the median annual wage for dental hygienists as \$77,810 with the lowest 10 percent earning less than \$60,100 and the highest 10 percent earning more than \$100,200. (See [www.bls.gov](http://www.bls.gov))

**Note:** Walla Walla University does not offer the clinical portion of the Dental Hygiene program.
